Employers' future staffing expectations

Source: National Skills Commission, Recruitment Experiences and Outlook Survey, Tasmania, Sep-21. Results for December, January and April are imputed due to insufficient data for this period.

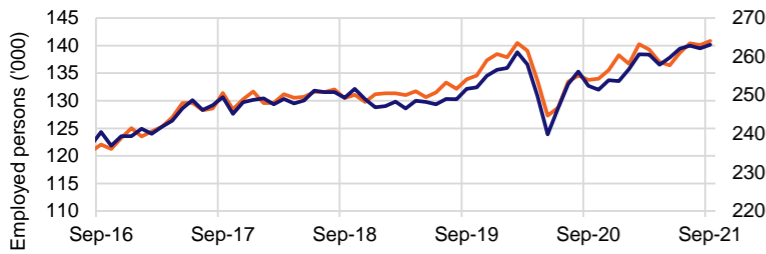

Note: Data in the labour market summary table are seasonally adjusted estimates, except for the youth unemployment rate which are *original* estimates. In the table, comparisons are made with March 2020 (pre-COVID-19), rather than an annual comparison, to avoid distorted results given the significant impacts of the pandemic from April 2020. Caseload data includes participants receiving both digital and provider servicing, and excludes those in other programs, such as ParentsNext or Transition to Work (TTW). Duration of unemployment data are based on a participant's time registered in employment services. For employers' future staffing expectations, businesses are asked about staffing numbers over the next three months. For any enquiries related to the data in this dashboard, please contact EmploymentPathwaysAnalysis@skillscommission.gov.au.

This **Labour Market Data Dashboard** provides key indicators for the labour market by Employment Region and is updated monthly.

Labour market summary table												
	Employment			Unemployment			Unemployment rate		Participation rate		Youth unemployment rate
